

Experience the livable remodeling difference.

During your remodeling project, dust will get everywhere. On the floor, furniture, glassware, dishes, even your toothbrush. But dust is more than an inconvenience—it poses a serious threat to your family’s health, your pets and your belongings.

That’s where BuildClean comes in:

- Keeps dust from settling where it shouldn’t—and from lingering in your home long after the work is complete
- Provides healthier conditions for family and pets
- Safeguards against particles and irritants like crystalline silica and lead
- Protects sensitive electronics like computers and TVs

When homes are remodeled, they can have

5-8x
the amount of
particles in
the air.

“It was kind of shocking that there was no dust anywhere. Period. It’s as if the project had not even happened.”

Jim Colpi, Homeowner, Northbrook, Ill.

“My contractor used the Build Clean Dust Control System during my home renovation. They used this machine for 24 hours and it immediately cleared the area of all dust. Since my daughter suffers from allergies and asthma, we all slept so much better knowing that this would not trigger a reaction.”

Laurie, Homeowner

TIPS FOR A TOTALLY LIVABLE REMODELING EXPERIENCE.

Important points to discuss with your contractor.

In order to ensure a safe, clean and livable home construction project from beginning to end, it's imperative to speak with your contractor about the following details.

1 Timeline

Ask about timing for major milestones in the project, so you can measure your contractor's progress and make sure your deadlines are being met.

2 Temporary living

Do any alternative living spaces need to be created for you (e.g., temporary kitchen or bedroom)?

3 Schedule

Knowing your contractor's schedule (and vice versa) makes it easier to navigate the rest of the project and communicate special situations.

4 Logistics

Think about everything—from where your contractor can park to how careful he or she has to be about the placement of tools (to keep small children and pets safe).

5 Dust control

You need to insist on a "clean" contractor that will talk to you about his or her dust control plan right away, before you even begin your project.
